Implementation and the application of the mobile agent for copyright management

KINOSHITA Lab. SUGIYAMA Yoichi (200402774)

Abstract

In late years various business came to be performed through the Internet such as auction or electronic transactions more and more by the spread of Internet. In such present conditions, unjust reading by the hosts that secret personal information is unjust such as the card numbers of the user becomes the social problem. I manage the secret information of the user in what I introduce an agent going around between a user and hosts into by this report and protect it from an unjust host and aim at the improvement of the convenience of the user.
